

## Privacy

Homes are being built closer to one another and the balance of providing sufficient natural light and privacy has become an issue. That's why 65% of homebuyers\* request light from above through skylights in their bathroom, a room where privacy and light is of the utmost importance.

\* NAHB National Home Shopper's Survey

## Ventilation

An electric or solar "Fresh Air" skylight will open to produce a "passive air conditioner." Through the chimney or exhaust effect they create, the warm air is drawn up through the venting skylight, providing a cooling effect and a flow of fresh air throughout the house.

## Quality

When choosing a skylight, consider the brand that delivers the best-engineered skylights in the building industry. Through rigorous research and testing, VELUX has developed skylights that are engineered not to leak.

## Weathertight

VELUX brand skylights are the world's most trusted brand of roof windows and skylights. When properly installed, our patented flashing kits eliminate any chance of leaking. They become an integral part of the roof, shedding water naturally, without the use of caulking or other sealants.

We stand behind all of our products with the VELUX promise, which can be found by visiting [www.thenoleakskylight.com](http://www.thenoleakskylight.com).

## Installation methods

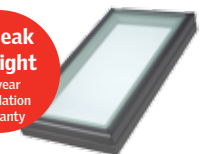

No leak skylight  
10-year installation warranty

### Deck mounted installation

Skylight with insulated glass lens, built-in wood frame combined with protective cladding, mounts directly to the roof deck.

No leak skylight  
10-year installation warranty

### Curb mounted installation

Skylight with insulated glass lens, combined with a durable metal frame mounts directly to a site-built curb.

### Pan-flashed installation

Skylight with insulated glass lens, wood frame, and protective cladding, combined with factory installed flashing system that mounts directly to the roof deck and requires roofing sealant.

### VELUX SUN TUNNEL™ installation

VELUX SUN TUNNEL skylight with UV resistant dome and diffuser, reflective tunnel and one-piece flashing system, mounts to the roof deck.

## The complete system

For complete control, VELUX offers a wide variety of blinds and accessories that are designed to fit perfectly into most of our skylights. Take advantage of our years of experience and the solutions we offer for controlling natural light and "Fresh Air."

## Optimal daylight

Most of us are looking for homes with an abundance of light because we require two to three times more light to see by age 60 as we did in our 20's. Skylights help balance the light in the room while reducing glare and transforming living areas into more open, safer spaces.

## Improved energy efficiency

Our "No Leak" skylights offer Clean, Quiet & Safe glass (advanced Low-E3 coating) that provides more daylight and better heat control than any other glass previously offered. The result is year-round comfort and energy savings.

## Daylight from above

Planning for enough natural light is important for the functionality of a home, but skylights offer many other benefits for our living spaces.

(SUN TUNNEL™ skylight with optional decorative diffuser shown)

## Life to small spaces

While conventional incandescent bulbs create an unnatural yellow glow, VELUX SUN TUNNEL™ skylights deliver natural light to areas of the home you never thought possible. The reflective property of tubular skylights also reduces your HVAC load by utilizing the natural power of the sun to bring passive light (*light without the heat emitted by electrical sources*).

## Free earth friendly light

Skylights cut down emissions and the need for electric lighting naturally. Using daylight not only reduces energy costs and consumption, but also lessens the growing demand for power that is currently challenging the health of the world's environment.
